Access for the disabled

Yes. For special needs, please contact Yorck von Korff

Mastering collective intelligence facilitation: tools and techniques for concrete results

In this training, participants experience and learn to master classic methods of collective intelligence facilitation, as well as techniques for better handling unexpected situations. The methods covered include:

- **Cases clinics** (to help a group perform better)
- The **World Café** (for creative, in-depth discussions in large groups)
- **Open Space Technology** (to enable a group to take ownership of new ideas, projects and work plans)
- **Future Search** (to help a social system self-construct a desirable future)

Techniques to better manage unexpected situations:

- The weather report (to defuse growing tensions)
- The emergency intervention (when a process deviates dangerously)
- « Somebody else... ? » (to calm emotional turbulence and avoid explosions)

By experimenting with these tools, **trainees also learn crucial principles of change management and conflict management.**
